Coon Hunt Score Card

Effective Date: December 13, 2025

Coon Hunt Score Card is a simple, reliable scoring app designed for coon hunters who want a fast and accurate way to score casts in the field. This app is proudly developed by the makers of **Coon Hunter Diaries**.

App Overview

Coon Hunt Score Card allows users to create and manage digital coon hunt score cards, enter dog names, handlers, judges, and cast information, record scores using plus, minus, and circle markings, track placements and final results, export completed score cards as PDFs or images, and share score cards via text message, email, social media, or save them to device storage. All functionality is designed to work offline.

How to Use the App

To create a score card, open the app, enter hunt details such as event name, cast number, judge, and guide, add dogs and handlers, record scores using the available scoring marks, and review totals and placements.

Use the export or share button to save the score card as a PDF, share via text message or email, post an image to social media, or save the file to your device. Sharing is always optional and fully controlled by the user.

Data & Storage

All score card data is stored locally on your device. No accounts are required, no data is uploaded to servers, and no internet connection is required for normal use.

Troubleshooting

If a score card does not save, ensure the app remains open while entering data and avoid force-closing the app before saving or exporting. If a PDF or share option does not appear, make sure all required fields are completed and confirm your device has available storage space. If the app appears unresponsive, close and reopen the app or restart your device.

Compatibility

Coon Hunt Score Card is designed for iPhone and iPad and optimized for field use in low-signal environments.

Frequently Asked Questions

The app does not require internet access and does not collect any personal data. Score cards can be edited until they are finalized and shared. Coon Hunt Score Card is developed by the same creator as Coon Hunter Diaries.
