

Beagle Hunter Diaries – Privacy Policy

Last updated: January 2026

Beagle Hunter Diaries (“the App”) is a hunting journal app designed for hunters who want to record their rabbit hunts and keep memories of their beagles — including hunt notes, locations, photos, and videos. Your privacy is extremely important. This policy explains what information the App collects, how it is stored, and how it is used.

1. No Account, No Tracking, No Hidden Data Collection

Beagle Hunter Diaries does not require an account, login, or cloud syncing. The App does not collect, transmit, or sell any personal information. Your data belongs entirely to you.

2. What Data the App Stores

The App allows you to store beagle profiles, hunt entries, photos, videos, notes, and statistics. This information is stored only on your device using Apple’s Core Data local storage technology. Your data is not uploaded to servers, not shared, and not accessible by the developer or third parties.

3. Photos & Videos

Any photos or videos added remain stored locally on your device. They are only used inside the App and are never uploaded automatically anywhere else.

4. Subscription Information

If you choose to subscribe, Apple securely processes all billing. The App only checks subscription status — payment data is never visible to the developer.

5. Keeping Your Data When Changing Phones

Because all data is stored locally, you must back up your device using iCloud Backup or iPhone to iPhone transfer if you want your journal data to move to a new device. If you delete the App or reset your phone without a backup, your data may be permanently lost. The developer cannot recover lost data.

6. Location Data

The App does not automatically collect location data. If you manually enter a location, it remains stored locally on your device.

7. Children's Privacy

This App is not designed for children under age 13. No personal data is knowingly collected.

8. Security

Your data benefits from Apple security features such as device encryption and Face ID/Passcode. Anyone with access to your unlocked device may be able to view your data.

9. Third■Party Services

The App may use Apple systems such as subscription billing or anonymous crash analytics. No personal identifying data is collected by the developer.

10. Data Control & Deletion

You may delete your journal entries at any time or remove the App to erase all stored data from your device.

11. Updates

This policy may be updated periodically. The latest version will always apply to the App.
